

MEGL Project Proposal: Math Outreach

Team: Sean Lawton & Anton Lukyanenko (faculty), Jack Love (graduate student), 1+ undergraduate

December 12, 2017

Mathematics outreach concerns changing the perception young people have about mathematics while having fun. MEGL goes into local schools and libraries and gives hands-on presentations about fun and interesting mathematics. We teach geometry with balloons and yarn, exponential growth with ping-pong balls, and primes with monsters. Interns will help implement these activities (mostly during the day) and also help with the development of a new activity for elementary school children to learn about infinity.

To learn more about our outreach activities please visit: <http://meglab.wikidot.com/outreach>.
